

Wholistic approach to security & backup with great support

Implementation and configuration of Google Workspace & Cloud Backup

The challenge

We are no stranger to technology, and know Google Workspace, websites, hosting and security but needed a holistic approach to managing these essential business services so we can concentrate on delivering our expertise to our clients.

The solution

We took the client's existing Google Workspace account and separated data to line up with a new brand spin off. After a detailed review, fixed up systems for security and implemented Cloud Backup. With business continuity a key driver - regular, proactive maintenance is now in place across the board to ensure ongoing stability and security of digital platforms.

The results

We don't have to worry about this any more. Instead of the ongoing headaches, distractions and worry, things just work. Our systems are integrated and we have a single point of contact for to remediate issues that arise. The setup & install was a breeze, though I'm sure not so for SixFive :-), but it's the ongoing support & "always there" approach that is most impressive.

“ It's great to have a partner that provides this breadth of solutions, with deep expertise to match. The ongoing support & "always there" approach is most impressive.

”

Adam Wood, CEO @ CertifiedBy.com
